DETAILED ACTION
EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this Examiner's Amendment was given in a telephone interview with Mark Swanson on 17 October 2006. The Examiner's amendment is due to the accidental dropping of the negative sign from the exponent of the optical density in a stop range.

The application has been amended as follows:

In the specification insert the following paragraph on page 5 after the third paragraph that starts with "This object can be achieved".

- In one embodiment a borosilicate glass is provided with a composition in a percent by weight on an oxide basis, including: 60 - 75% SiO₂, 10 - 15% B₂O₃, 5 - 15% Na₂O, 5 - 10% K₂O, 0.1 - 1% CaO, 0.5 - 3% BaO, > 0 - 1.7% TiO₂, 0 - 0.5% Sb₂O₃, and normal refining agents, and having an edge wavelength λ_c between 280 nm and 325 nm and a pass range internal transmittance (τ_{ip}) of greater than 98% and an optical density in a stop range of 1×10^{-5} with a sample thickness of 2 mm. - -

Replace claim 1 with the following:

- - A borosilicate glass with a composition in a percent by weight on an oxide basis, including: 60 - 75% SiO₂, 10 - 15% B₂O₃, 5 - 15% Na₂O, 5 - 10% K₂O, 0.1 - 1% CaO, 0.5 - 3% BaO, > 0 - 1.7% TiO₂, 0 - 0.5% Sb₂O₃, and normal refining agents, and having an edge wavelength λ_c between 280 nm and 325 nm and a pass range internal transmittance (τ_{ip}) of greater than 98% and an optical density in a stop range of 1×10^{-5} with a sample thickness of 2 mm. - -

Allowable Subject Matter

Claims 1-4, 6-15, and 17-24 are allowed.

Reason For Allowance

The following is an examiner's statement of reasons for allowance:

The prior art fail to disclose or suggest a glass composition having the composition as recited in the instant claims, which result in the recited properties specifically the difference between the HTV temperature and the liquidus temperature being at least 150°F.

The closest prior art is deemed to be U.S. Patent 4,562,161 by Mennemann et al. Mennemann et al. discloses a similar composition but does not teach that the glass has a pass range internal transmission greater than 98 %. Mennemann et al. teach that the glass, essentially completely absorbs the transmission of UV light from 340 to 390 nm, where the instant claims require that UV light is transmitted in the past band region, which includes 340 to 390 nm.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Elizabeth A. Bolden whose telephone number is 571-272-1363. The examiner can normally be reached on 10 am to 8:30 pm every Friday off.
